

Advanced Studies in Clinically-Oriented Anatomy in 2011

www.med.monash.edu.au/anatomy

The Monash University Department of Anatomy and Developmental Biology and Department of Surgery (MMC) are pleased to announce “Advanced Studies in Clinically-Oriented Anatomy” in 2011.

The course will provide training in topographical anatomy for registrants wishing to advance their knowledge in the anatomical sciences. Though primarily designed for trainees preparing for specialist college examinations, the course is also open to members of any other health science discipline. In view of the previous popularity, registrants are advised to enrol early.

The course will be taught in a collaborative manner by professional career anatomists from Monash University along with the relevant specialist clinicians. It will involve the use of a range of teaching resources at the Clayton campus. The course will consist of 23 sessions on Monday evenings from 6.30 to 8.30 pm and will cover areas of topographical anatomy of clinical relevance. The course does not involve cadaveric dissection, but candidates will have the opportunity to examine prosected specimens.

Participants completing the course in 2011 will receive a certificate of participation. The course will be offered in modules. Candidates can select one or more modules.

After registrations, more detailed information will be sent to you.
