

Advanced Studies in Clinical Anatomy 2012

The Monash University Department of Anatomy and Developmental Biology and Department of Surgery (MMC) are pleased to announce 'Advanced Studies in Clinical Anatomy 2012'.

The course will provide training in topographical anatomy for registrants wishing to advance their knowledge in the anatomical sciences. Though primarily designed for trainees preparing for specialist college examinations, the course is open to members of all health science disciplines. In view of the previous popularity, registrants are advised to enrol early.

The course will be taught in a collaborative manner by professional career anatomists from Monash University along with relevant specialist clinicians. It will involve the use of a range of teaching resources at the Clayton campus. The course will consist of 20 sessions on Monday evenings from 6.30 to 8.30 pm and will cover areas of topographical anatomy of clinical relevance. The course does not involve cadaveric dissection, but candidates will have the opportunity to examine prosected plastinated and potted specimens.

Participants completing the course in 2012 will receive a Certificate of Participation provided they attend 66 per cent of all sessions. The course is recognized by the Royal Australasian College of Surgeons.

After registrations, more detailed information will be sent to you.
