Prospectus

*Creating knowledge
for improved health*

School of Public Health and Preventive Medicine

Overview

- We are Faculty's principal source of skills in epidemiology, biostatistics and data-management.
- We have expertise in large epidemiological studies, multicentre clinical trials, clinical registries, evidence synthesis and health social science;
- Our key research "platforms" include our biorepository, The ASPREE database and our clinical registries;
- We work closely with the major Monash affiliated hospitals, research institutes and public health units within Victoria. Our skills provide a key resource underpinning translational research within our Faculty.

Research focus

Our research focuses on prevention of disease and disability through a commitment to education, innovation, leadership, and research.

Our principal areas of research include:

- chronic disease prevention & health promotion;
- improving the care of the critically ill and injured;
- women's health;
- Improving the management of heart failure;
- biostatistical methods and modelling;
- transfusion science;
- health workforce;
- evidence synthesis;
- improving quality and safety of healthcare;
- forensic science;
- monitoring drug & device safety;
- healthy aging;
- improving workplace safety; and
- environmental health;
