MONASH UNIVERSITY HEALTH SERVICE (UHS) HEALTH SCIENCE STUDENT (HSS) VACCINATION AND INFECTIOUS DISEASE QUESTIONNAIRE 2014.

Surname: ________________________ First Name: ________________________
D.O.B: __ / __ / ___ COURSE: ____________________________________________
Medicare/ Worldcare Assist OSHC / Medibank Private No: ________________________
Phone No : ________________________ Email: _______________________________
In which country(s) did you spend your childhood? _____________________________

Did you complete your routine childhood immunisation:  □ Yes □ No □ Uncertain?

Caulfield:  99031177  B Block, Cn Sir John Monash Drive & Queens Av,Caulfield East, 3145
Clayton:  99053175  Building 10, Wellington Road, Clayton,3800
Peninsula:  99044615  Building A,McMahons Road,Frankston,3199

As a Health Science Student (HSS) you are required to participate in placements during the course of your study. To safely do this your Infectious Disease risk must be assessed and Immunisation status must be up to date and protective prior to attending these placements. Updating may take several months so you must start this process early.

For full details please go to your faculty Web page.

There is a range of vaccinations that need to be matched with your individual past vaccination history and serology. Vaccinations will be recommended following a review, by the Health Professionals at UHS, of your blood test results and documentation. Please use this as a checklist for collecting your information.

Revaccination may be required for some vaccinations if documentation is not available

NB: PLEASE BRING A NAMED PHOTOCOPY** of ALL your immunisation records with you to your 1st appointment at the University Health Service.

Page 1 of 2: Reviewed 27/09/2013

Personal records may be found via:

- Parents/guardian (e.g. immunisation book or card)
- Local government council or shire where vaccinations have been administered - ask for a printed record of immunisation (some councils/shires charge a small fee)
- School records
- Personal GP or Medical Practitioner or Travel Clinic: Ask for a copy of your immunisation history.
• 2 Doses of Measles / Mumps / Rubella Vaccination:
  * Those born after 1966: It is essential for HSS to have had 2 documented vaccinations of Measles / Mumps/ Rubella (MMR)
  * Those born prior to 1966: Serological evidence of all 3 antigens can be considered evidence for Dose 1

• 3 Doses of Hepatitis B (if given at <11 or >15yrs) or 2 Doses of Hepatitis B (if given between 11 – 15yrs):
  * Documentation of previous doses is an essential Requirement
  * If you have NO previous documentation you may require an accelerated course of Hepatitis B Engerix Adult vaccine: *

• 2 Doses Hepatitis A Vaccination
  * Serology (Blood Test) will be conducted UNLESS vaccination is documented.
  * Vaccinations includes Avaxim/Vaqta/Havrix/ Twinrix
  Note: If no documentation of previous Hepatitis B: do not commence a course of Twinrix

• Minimum 3 Doses of Diphtheria / Tetanus/ Pertussis as a primary childhood course.
  * May be documented as DTPa / DTPw / CDT / Triple Antigen / Infanrix /

• Booster dose of Diphtheria / Tetanus/ Pertussis in last 5 years
  * May be documented as dTpa / Boostrix / Adacel

• Minimum 3 Doses of Polio as a primary childhood course: + Booster is recommended
  * May be documented as Sabin / OPV/IPV/ Polio

• 2 Doses of Varicella (Chicken Pox) Vaccination or serological evidence of Varicella Disease
  * Serology (blood Test) will be conducted regardless of history of disease EXCEPT if any vaccination is documented.
  * Results will determine recommendations

• Influenza Vaccination
  * Annual Vaccination highly recommended. May be documented as Influvax / Vaxigrip / Fluvarix /Fluarix/ Fluvirin/
  * HSS may be declined placement or have limited placement by some providers if Influenza Vaccination is not current

• Meningococcal C Vaccination
  * A Single Dose of conjugate Vaccine is highly recommended. May be documented as Menjugate / NeisVac C / Meningitec
  * Discussion regarding the option of Menactra/ Menveo: Conjugated Polyvalent ACWY will occur.

• BCG & TB (Tuberculosis) Screening
  * TB screening (Mantoux or Quantiferon) is essential for HSS and will be conducted during the assessment process.
    There is a cost associated with both of these tests.
  * Quantiferon Blood test is the preferred testing method currently in use by UHS.

  *BCG vaccine is given at birth in many countries. In Australia mass vaccination ceased in 1980. The BCG creates a scar.
