MEN'S SEXUAL & REPRODUCTIVE HEALTH

Synopsis
This unit aims to acquaint family physicians with the latest information about andrological topics - and to make them confident and comfortable in dealing with patients who suffer from the many disorders of the male reproductive organs. The content of the unit will cover: androgens; male infertility; erectile dysfunction; benign prostate disease, prostate cancer, testicular tumours and sexually transmitted infections. The Department of General Practice acknowledges Andrology Australia, an initiative of the Australian Government Department of Health and Ageing, for its financial commitment to the initial development of this module.

Objectives
By the end of this unit students should be able to:

1. Appreciate the major issues in male reproductive health today.
2. Explain in detail the physiology of the male reproductive system,
3. Demonstrate confidence in dealing with issues of infertility and erectile dysfunction.
4. Discuss recent advances in diagnosing and managing prostate disease.
5. Explain the issues of diagnosis, management and prevention of testicular tumors.
6. Develop skills in conducting a clinical audit. Conduct a clinical audit.
7. Recognise the potential of audits to improve clinical practice.
