MUCCY is designed for children presenting with mild to moderate developmental delay; who are preparing for school transition, or in early primary school years.

This service is designed for children who would benefit from a little extra practice with fine motor activities relevant to their school participation such as cutting, pencil skills, manipulating small objects, and activities that are designed to strengthen shoulder, hand, and finger muscles.

MUCCY can also be of benefit to children who need help in other areas, such as:
- organising themselves and their possessions
- starting and finishing tasks
- confidence to have a go
- asking for help when needing it
- following instructions.

WHAT IS MUCCY AND HOW WILL IT ASSIST MY CHILD?

WHO TO CONTACT
To find out more or to take part please contact the MUCCY Intake worker.
Ph: (03) 9904 4023

SERVICES WE OFFER

WHAT IS OCCUPATIONAL THERAPY FOR CHILDREN?

Occupational therapy promotes normal development and stimulates learning in children with specific learning difficulties, disabilities or injury and delayed development.

Working with children, their families and teachers, occupational therapists aim to improve the child’s quality of life by helping them to participate in play, preschool, school and home activities.

YOUR CHILD IS ELIGIBLE IF:

You have concerns about your child’s motor skills, handwriting, or general development or participation.

Your child is not currently accessing public or private occupational therapy services.

TESTIMONIAL

“We found the Fingergym program to be a highly enjoyable and worthwhile program. We noticed considerable improvement in our son’s fine motor skills and were provided with a range of simple, effective and fun activities that we could do at home”

Steve, Parent

INDIVIDUAL SCREENING ASSESSMENT

We can assist by providing an individual appointment for an assessment of your child’s underlying skills, using a standardised developmental assessment. This will include a summary report, feedback session with relevant intervention strategies tailored to your child’s individual needs.

GROUP PROGRAM

We offer a small group evidence based program specifically designed to develop fine motor skills and handwriting. Fingergym™ uses fun and motivating fine motor based activities to target many skills necessary to help children become more independent in the classroom.

COST

This non-for-profit service is facilitated by occupational therapy students at Monash University, under the supervision of registered paediatric occupational therapists.

There is a fee associated with this service.
