Announcing an opportunity for a PhD or DPsych student to work on a new project examining the relationship between sleep and Post Traumatic Stress Disorder (PTSD). The project will be based within Monash University’s new purpose-built Sleep and Circadian Medicine Laboratory at the Be Active, Sleep and Eat (BASE) research facility in Notting Hill. The successful candidate will work under the mentorship of Professor Sean Drummond, a new Professor in the School of Psychological Sciences and an expert in sleep, cognition, and psychiatric disorders. As Prof Drummond is joining our School this summer, the candidate will have an opportunity to work with him to develop their own project. Potential projects involve investigating psychophysiological mechanisms related to fear and safety underlying the sleep-PTSD relationship and/or treatment of sleep difficulties in PTSD. The candidate will have the opportunity to learn a range of techniques, including psycho-physiological testing, multiple methods of assessing sleep, cognitive testing, and/or sleep interventions, depending on interests.

For further information, please contact:
Professor Sean Drummond
